

Profile Page Metrics - Design Brief for UI Designer

Please find below the visual and contextual guidance for implementing key user performance metrics on the profile page. Each metric includes a description, suggested visualization, and supporting user-facing context.

1. Peak Gaming Hours

- Description: Time of day when the user performs best (highest average scores).
- Visual Suggestion: 24-hour clock visualization with highlighted peak times.
- Additional Context: "Your best gaming time is between 2 PM - 4 PM."

2. Improvement Rate

- Description: Percentage increase in average scores over the last 30 days.
- Visual Suggestion: Upward trending line graph with percentage label.
- Additional Context: "You've improved X% since last month!"

3. Game Diversity Score

- Description: Number of different games the user has tried.
- Visual Suggestion: Grid of game icons with completion status (e.g. checkmarks, progress bars).
- Additional Context: "You've mastered X out of Y available games."

4. Consistency Score

- Description: How regularly the user plays, based on frequency and pattern.
- Visual Suggestion: Calendar heat map showing daily activity.
- Additional Context: "You're most active on weekends."

5. Challenge Completion

- Description: Number of games completed with scores above certain thresholds.
- Visual Suggestion: Achievement-style badges or medals.
- Additional Context: "You've achieved high scores in X games."

6. Session Efficiency

- Description: Average score per minute of gameplay.
- Visual Suggestion: Speedometer-style gauge.
- Additional Context: "You're X% more efficient than last week."

7. Comeback Rate

- Description: Percentage of games where the user improved their score after a low start.
- Visual Suggestion: Progress bar with comeback highlights or arrows.
- Additional Context: "You're great at turning games around!"

8. Game Mastery Level

- Description: Overall proficiency rating based on completion rates and scores.
- Visual Suggestion: Level indicator with progress to next level.
- Additional Context: "You're a Level X Master Gamer."

9. Performance Stability

- Description: Consistency in user scores (standard deviation).
- Visual Suggestion: Range indicator or bell curve showing score consistency.
- Additional Context: "Your scores are very consistent!"

10. Longest Active Session

- Description: Record for the longest continuous gameplay session.
- Visual Suggestion: Timeline visualization showing session length.
- Additional Context: "Your longest gaming marathon was X hours."

11. Multi-Game Performance

- Description: User performance across different game types.
- Visual Suggestion: Radar chart showing strengths in various genres (e.g., strategy, arcade, puzzle).
- Additional Context: "You excel in strategy games."

12. Achievement Progress

- Description: User progress towards various gaming milestones.
- Visual Suggestion: Progress bars for different achievements.
- Additional Context: "X more games to reach the next milestone."

Please ensure all visualizations are styled consistently with the overall brand look, and optimized for both desktop and mobile responsiveness. Use accessible colors, animations where applicable, and tooltips for detailed data insights.
